Fix bad HTML and Javascript

Look at the two files provided: `bad.html` and `bad.js`. These files have several issues. You must correct them.

- The HTML document must be valid and W3C compliant.
- The HTML elements must be as semantic and clean as possible.
- There should be no error messages in the Javascript console.

The behaviour of the green divs should be:

- clicking on a green div hides it from the view
- clicking on `Reload page` reloads the page (and the divs)

The page displays a list of numbers (each one is in a paragraph). Clicking on each of these elements should open an "alert" dialog, displaying the correct number.

Make changes in the HTML and Javascript files. Make sure you extensively explain and describe the changes you are making, and why you are making them. If the answer is correct but the explanation is not or incomplete, you will not get marks.

Grading rubric

Item	Mark
HTML issues are fixed, and the fixes properly justified	4 marks
Javascript issues are fixed, and the fixes properly justified	3 marks
